# MANUAL INSTRUCTIONS - Mounting to the window frame

| width = A | height = B |

Measure the width and height of the frame (inner edges of the recess).
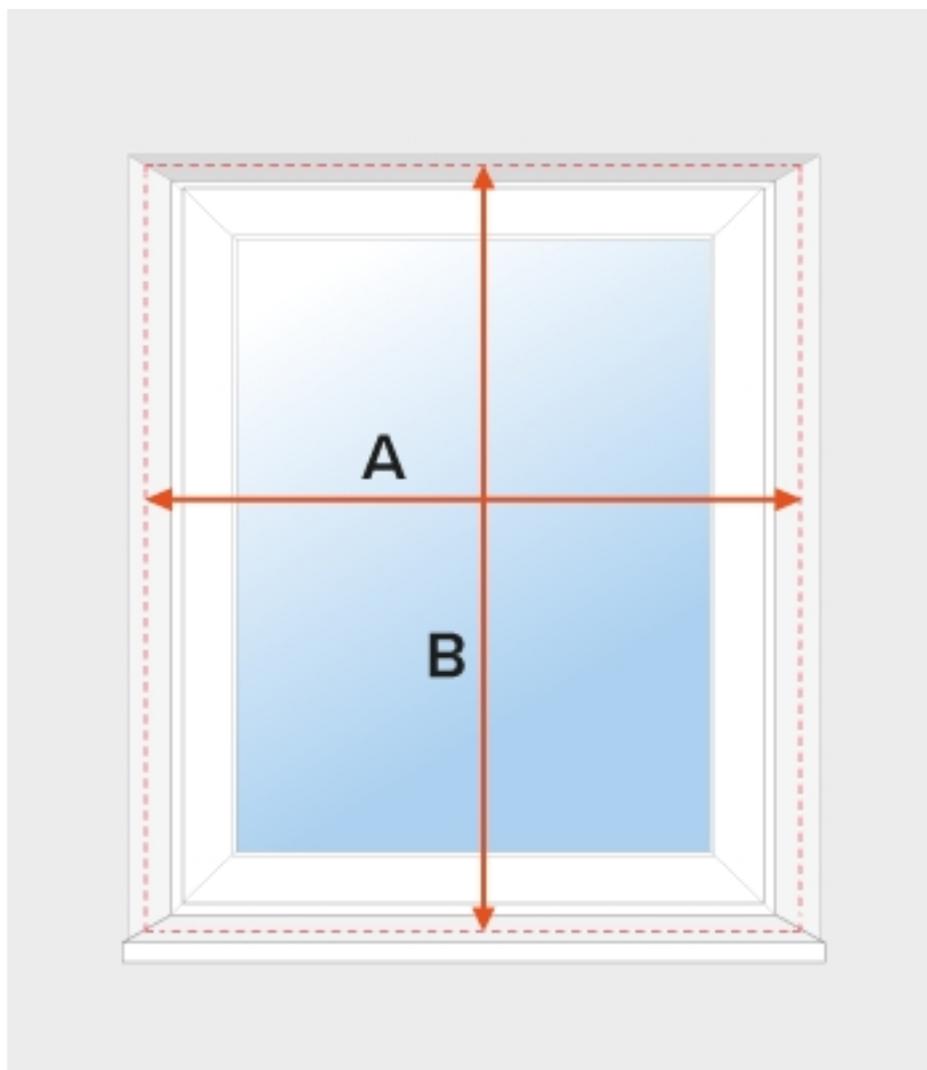

A note of caution-
To ease the installation of the product, we automatically subtract about 2 mm from the given dimensions. The total size of the product will be calculated automatically.

⚠ **All dimensions must be entered in millimeters(mm)**

MANUAL INSTRUCTIONS - Mounting in a recess

width = A	height = B

Measure the width and height to the edges of the recess.
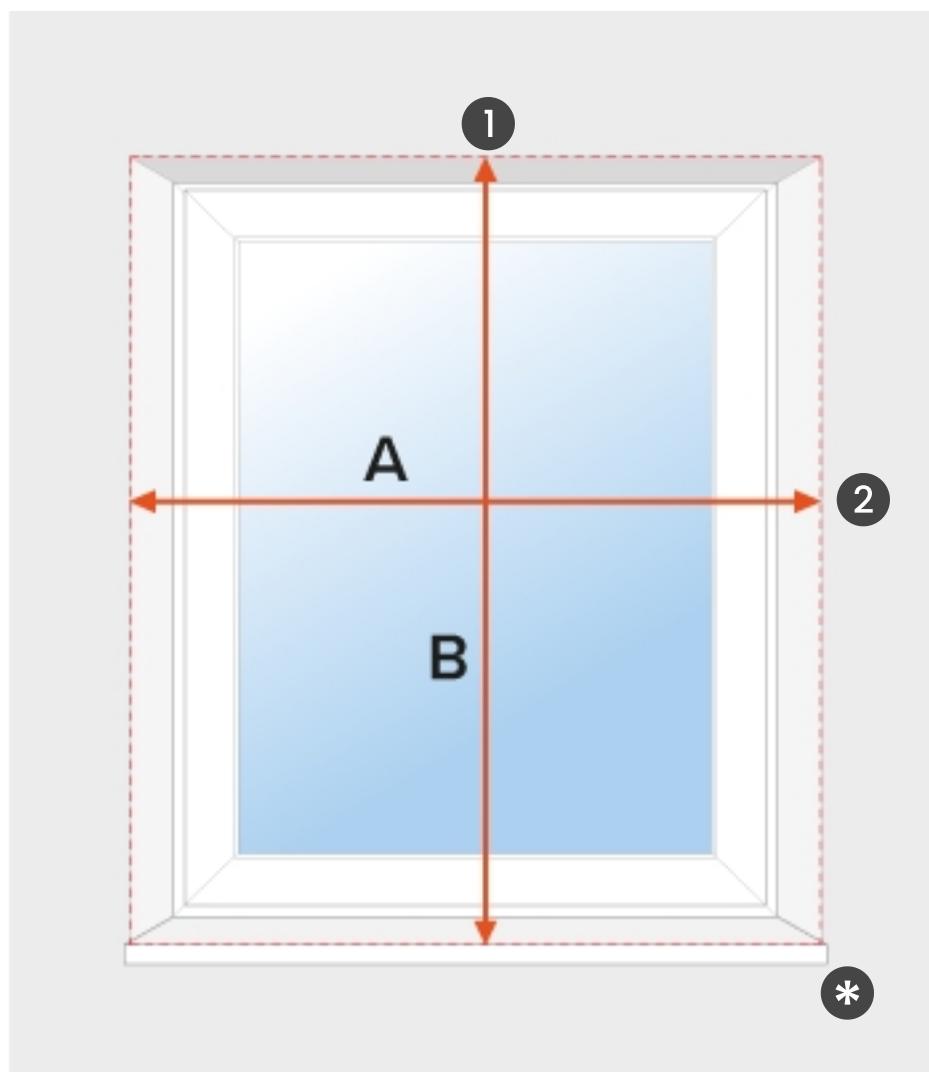

A note of caution-
To ease the installation of the product, we automatically subtract about 2 mm from the given dimensions. The total size of the product will be calculated automatically.

Significant unevenness in the window recess can make it difficult to mount the product - measure the recess in three points and give the smallest dimension. Remember to take all measurements at the same recess depth. To do this, use a spirit level and/or a ruler to mark the mounting points of the mosquito net.

⚠ All dimensions must be entered in millimeters(mm)

MANUAL INSTRUCTIONS - Mounting on the wall

| width = A | height = B |

Measure the width and height of the window recess opening (outer edges of the recess).

A note of caution-

Please note: The total size of the product will be calculated automatically.

1 The mosquito net headrail height will be added to the height given.

+49 mm when B < 1800 mm   +57 mm when B >= 1800 mm

2 The width of the guides (+70 mm) will be added to the specified width.

* If you want to cover a larger area, consider protruding elements such as a windowsill.

⚠ **All dimensions must be entered in millimeters(mm)**
